Product Stewardship Program

Duracube is committed to environmental responsibility and sustainability throughout the lifecycle of our products. As part of this commitment, we have established a Product Stewardship Program to facilitate the responsible disposal and recycling of our toilet partitions made from Durasafe Compact Laminate.

1. Return Process

Clients are encouraged to return their toilet partitions to Duracube at the end of their lifecycle, provided they are constructed from Durasafe Compact Laminate.

Clients are responsible for organizing and covering the cost of transportation to the Duracube Sydney Warehouse address.

2. Disassembly and Separation

Upon receipt, Duracube will charge clients a nominal fee of \$50 per cubicle to disassemble and separate the materials into aluminum, stainless steel, and Durasafe Compact Laminate components.

3. Recycling Process

Duracube will recycle the aluminum and stainless steel components through appropriate recycling channels.

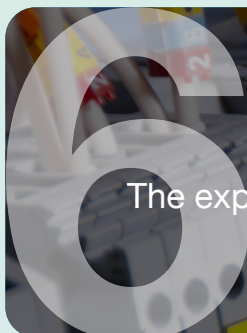

4. Sorting and Cataloguing

The returned Durasafe Compact Laminate material will be sorted and cataloged based on colors and sizes.

5. Packaging and Export

Duracube will package the processed Durasafe Compact Laminate material for export to start its next life.

6. End Use

The exported material will be sent to India through a certified trader for use in Electrical Switchboards on construction projects.
