**05 Perspective**
**Product Design Guidelines**

- Maximum sheet size is 1800x3600mm, larger sheets will have a join and associated costs of using 2 sheets.
- Divisions and Doors over 1800H will have additional cost.
- Refer to schedule to the right for system specific rules
- Select from 28 Standard Laminate Colours

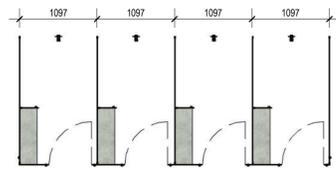

**Family Usage Guidelines**

- Load the Family into your Project directly or copy/paste from this project file. Using Load Family you will be presented with a Type Catalog, allowing you to specify the configuration/size you require.
- The family is line based, so simply click a start location and end location and the length will be matched. If using one of the Minimum width types, the width of each cubicle will be calculated based upon the overall length and maintaining the minimum width, otherwise it will be the fixed width.
- Modify the instance parameters as required (NOTE: If you hover over a parameter, there are tooltips which explain what the parameter does and any specific rules around it.)
  - Door Typical Swing Condition - controls whether the door swings inwards/outwards or is left hand or right handed for all doors that aren't End Doors.
  - End1 & End2 Door Swing Condition - controls the end door swings similarly to above, for example you may want the end bay to be a PWD or Ambulant bay.
- Use the Material parameters to control the appearance of the Doors, Channels/Hardware & Panels.
- Door Hinge Offset / End1 & End2 Hinge Offset - controls the door offset, on its hinge side from the closest division.
- End1 & End2 Division - turn on/off the End Divisions for instance, these may be enclosed by a wall so you won't require a division panel.
- End1 Channel - turn on/off the End1 Channel for instance, you may have showers adjacent to the toilets and want a seamless connection. You can turn off the channel and then use the "Join Geometry" command on the Front Panels to remove the linework. Therefore it appears as a seamless front.
- End1 & End2 Stall Type - Specify if the End Bays are Standard, Ambulant or PWD. This controls the visibility of the associated fixtures/hardware/door handles and the sizing and heights of certain elements. EG: On an ambulant bay the width is automatically restricted to be between 900-920
- End1 Stall Rotated - This allows you to create an End Cubicle that might be full width. Refer to the example condition in this project.
- Fixtures Off - when ticked this will turn off the fixtures of the End1 Bay to allow the above condition to work.
- Construction Parameters - These dropdowns allow you to select specific fixtures such as the Toilets, Toilet Paper Dispenser, Shower Head & Shower Mixer. Only select elements of the same naming. EG: If you select a Toilet in the Shower Head dropdown list you will likely get an error or a very bizarre shower head.
- Clearance Zones - are assigned to Generic Models>Clearance Zones subcategory. Turn this off in your views if you don't want to see them.
- There are also numerous other dimension parameters to control the position of fixtures.

**04 Perspective**
**Product Design Guidelines**

- Maximum sheet size is 1800x3600mm, larger sheets will have a join and associated costs of using 2 sheets.
- 4x Different Lock options available
- Select from 28 Standard Laminate Colours

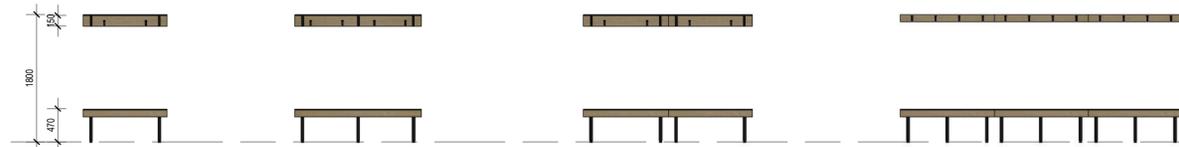

**Family Usage Guidelines**

- Load the Family into your Project directly or copy/paste from this project file. You can choose Wall Hung, Plinth Mounted or Bench Mounted versions. There is a Type Parameter to specify stepped doors and have vents. You can also choose to have it automatically calculate the width of a bay based upon a minimum size to fill the length.
- The family is line based, so simply click a start location and end location and the length will be matched.
- Modify the instance parameters for the materials & number of lockers per bay (vertically). Select from 5 different lock options and turn on/off the end gables as required.
